

Southmead Hospital Redevelopment

Project Description:

New state of the art super hospital built in place of existing with an area of approximately 115,000m², consisting of 800 beds and 24 theatre suites.

Two multi-storey car parks and grade parking to provide 2,700 parking spaces are also part of the project as well as improvements to existing access routes and infrastructure.

In this phase Churngold's main work consisted of external works to the building such as surfacing and courtyard and drainage finishes.

Key Works carried out:

Groundworks: External surface water drainage, such as channel drains, yard gullies and any associated pipework were installed for hospital courtyards throughout the development as well as Gullies for low voltage cables and exterior lighting bollards.

Hard landscaping: External finishes such as brick paving, path edging, soil planters and slabs were prepared and laid. As much material as possible excavated on site was recycled and used elsewhere to reduce amount of waste being transported away from site.

Project Overview

Client:
Carillion

Location:
Southmead, Bristol

Sector:
Groundworks/Hard landscaping

Project value:
£6 million

Engineer/Architect:
TPS Consulting

Project Period:
May 2012 – November 2013
